--------------------	-----------

GENERAL INFORMATION

Our watchword is excellence. It is our standard in customer service and component quality, and we share the long-term Sprague commitment to it as The Mark of Reliability.

One of our goals is "to be our customer's most favored supplier." Our Commitment to Excellence program is one of the paths to that goal. It carries the message of quality and reliability to all of our people. It's everyone's job.

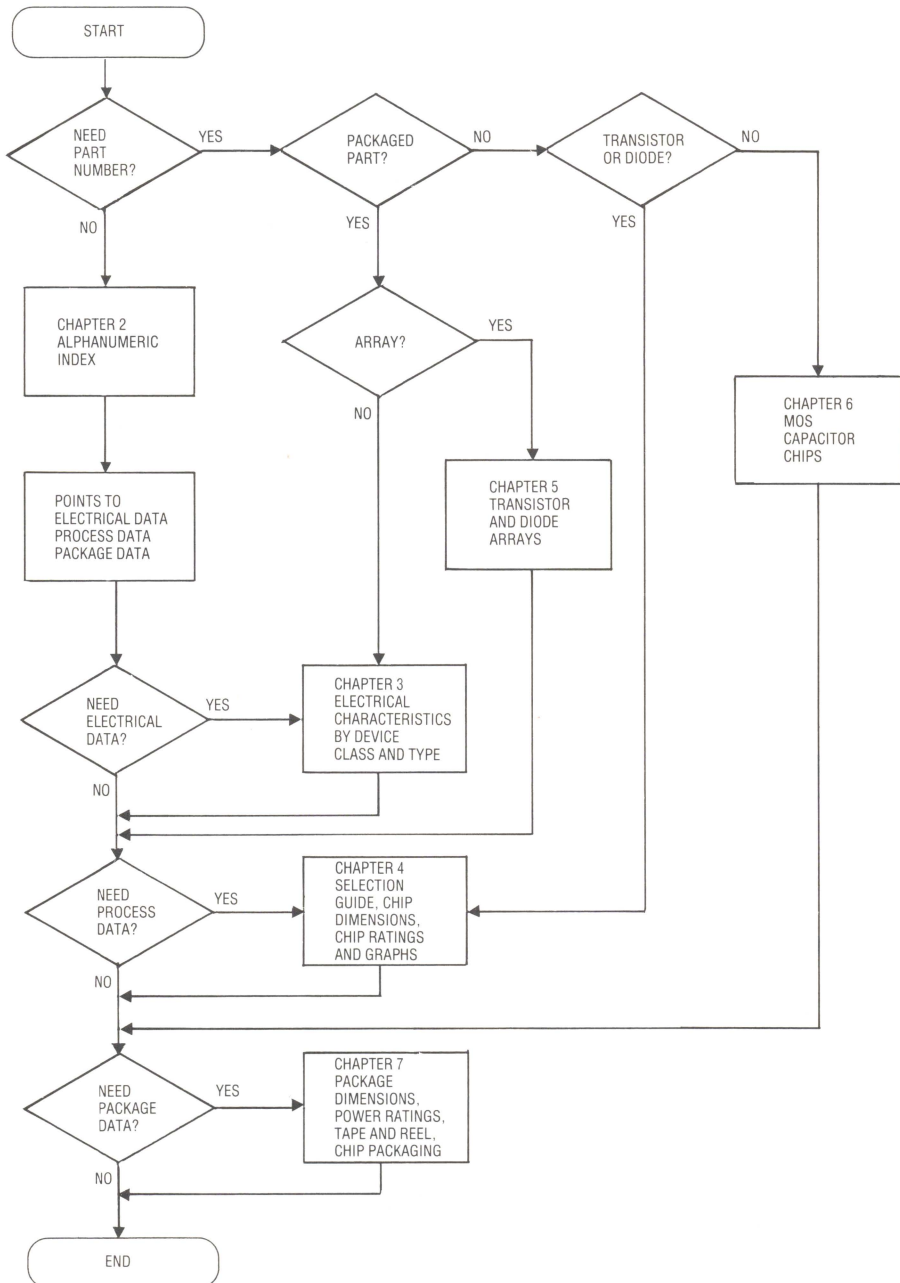

The Sprague Semiconductor Division uses statistical process control. It ships to stock. It has preferred vendor relationships with several of its customers. Our promise, however, runs deeper than top-notch tools, techniques and contracts. Commitment to Excellence delivers the backing of our entire organization in meeting your requirements.

We realize that only you, our customer, can be the judge of our effectiveness. We look forward to an opportunity to serve your needs.

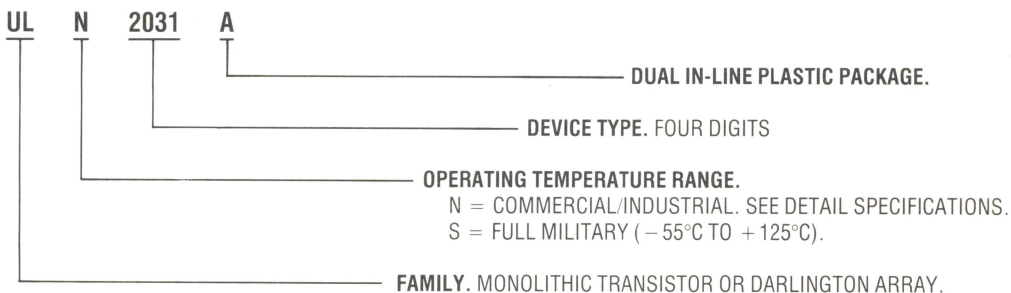

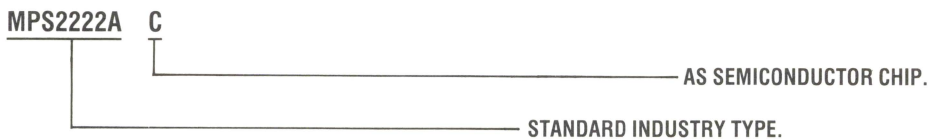

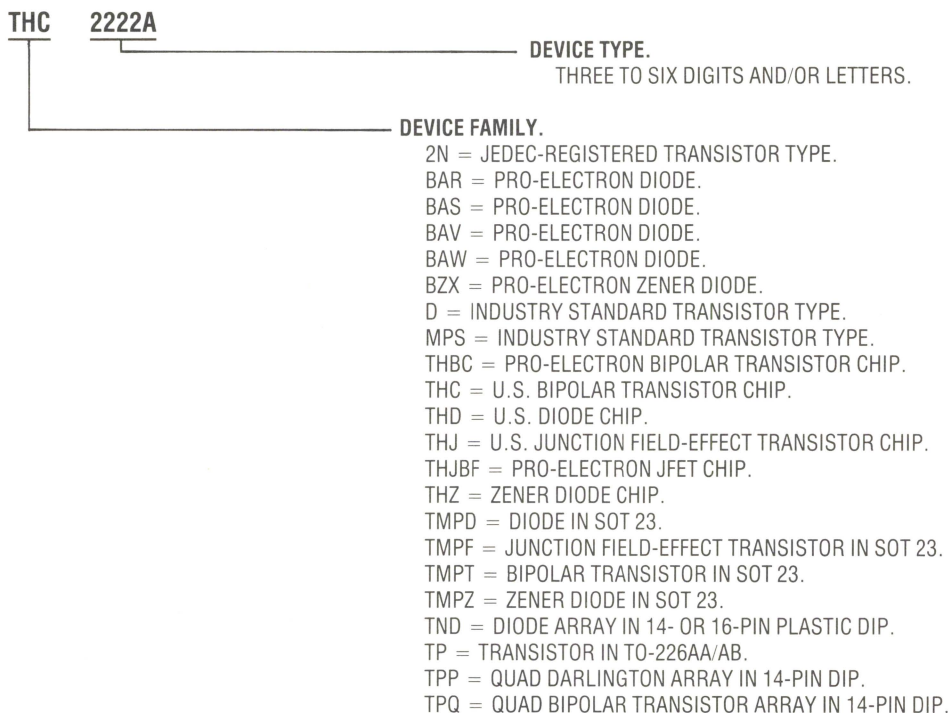

Allan S. Kimball

Allan Kimball
General Manager

USING THE DATA BOOK

PART NUMBERING

CHIP COMPONENTS

The chip components group, located at the Concord, New Hampshire, headquarters of the Sprague Semiconductor Division, is dedicated to serving the hybrid circuit industry. We invite you to visit our manufacturing facility.

All semiconductors referenced in this data book are available in die or wafer form. Transistor and diode dice shown in Chapter 4 of this book are prime processes. Variations, using identical geometries, are produced by changing the epitaxial layers during wafer fabrication. The process modifications can be used to shift breakdown voltage and current-gain ratings to desired values. For additional information, call us in Concord.

Visual Inspection

All chips are visually inspected for flaws such as metallization or oxide defects, the presence of foreign material, and gold back-side or wafer-sawing defects.

Dice are subjected to visual inspections meeting, as a minimum, the criteria of MIL-STD-883 or MIL-STD-750, Methods 2072 and 2073.

Electrical Testing

State-of-the-art test equipment performs 100% die probe on wafers. Individual samples from each wafer are subjected to all ac and dc tests to guarantee an LPTD of 10% or a customer-specified LPTD or AQL.

Gold-Backed Chips

Appropriately doped gold is sputtered onto a sputter-etched surface and alloyed to form a back-side contact that accommodates epoxy or eutectic die-bonding methods.* N-type substrates receive sputtered arsenic-doped gold. P-type substrates receive sputtered gallium-doped gold. The standard gold backing is 3000 Å thick. Thicker gold backing can be furnished on request.

Silver-Backed Chips

Power devices can be furnished with an optional tri-metal silver back-side that is compatible with solder reflow bonding methods.

Packaging

Semiconductor dice are packaged in three ways:

1. As probed, unscribed wafers in separate wafer containers.
2. As probed and sawn wafers, mounted on PVC film in a steel frame and covered with protective plastic.
3. As individual dice, in a waffle or tray pack, with typically 400 devices per pack.

High-Reliability Products

We offer discrete semiconductor chips subjected to test requirements of MIL-STD-883, Method 5008, for Class S and Class B element evaluation, with the single exception of Group 4, Radiation Testing. Please contact the factory for detailed information on Sprague HYREL® processing.

NOTE

Parametric degradation, especially reduced low-current h_{FE} performance, often results if the base junction of a bipolar transistor is brought to breakdown conditions.

For this reason, Sprague Electric strongly recommends that you avoid subjecting the base junction of a transistor to breakdown tests such as those for $V_{(BR)CBO}$ or $V_{(BR)EBO}$. Those tests can be replaced by leakage tests, such as those for I_{EBO} and I_{CBO} , which safely confirm that devices are within specified limits. Tests for $V_{(BR)CEO}$ and $V_{(BR)CES}$ can be performed as standard procedures.

*Eutectic die-bonding temperatures should not exceed 450°C. A nitrogen/hydrogen (85/15) forming gas is recommended.

Semiconductor dice shown in this section are products of prime manufacturing processes. Variations, with identical geometries, are produced by changing the epitaxial layers during wafer fabrication. The process modifications can be used to shift breakdown voltage, current gain, and other electrical characteristics to desired values. For additional information, contact our Customer Service Center in Concord, NH.

Process BAA
NPN Small-Signal Transistor

This double-diffused, silicon epitaxial planar device is designed for general-purpose use. Selected versions of the Process BAA NPN transistor find broad application in AM radio equipment, IF stages, and converters, and as audio drivers, video amplifiers, and operational amplifier output stages.

ABSOLUTE MAXIMUM RATINGS

Process BBC
NPN Small-Signal Transistor

The electrical characteristics of selected versions of Process BBC, the NPN counterpart of Sprague Electric's planar PNP Process BDA transistor, match those of many popular device types. These double-diffused silicon epitaxial chips are used as general-purpose amplifiers and medium-power switching transistors in a wide variety of small-signal, low-noise applications.

Process BDA
PNP Small-Signal Transistor

A general-purpose PNP transistor, Process BDA is used as a low-noise, high-gain amplifier and as a medium-power switcher at frequencies from dc to UHF. Selected Process BDA chips conform to the electrical characteristics of a broad variety of popular transistor types. The double-diffused, silicon epitaxial planar device is the complement to Sprague Electric's NPN Process BBC transistor.

ABSOLUTE MAXIMUM RATINGS

Collector Current, I_C 500 mA
Operating Junction Temperature, T_J +150°C
Storage Temperature Range, T_S -55°C to +150°C

ALTERNATE PROCESSES: DDA, JFA, TQL

JUNCTION CAPACITANCE AS A FUNCTION OF REVERSE BIAS

Dwg. No. A-14, 081

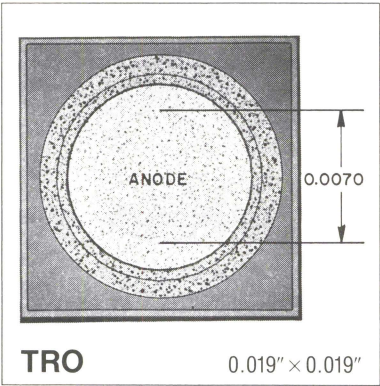

Process TRO

Medium-Speed Switching Diode

Process TRO produces a non-gold-doped silicon epitaxial diode used primarily as a medium-speed switching device. Designed to 1N485 specifications, the diode has a breakdown-voltage rating of 200 V, and a typical t_{rr} rating of 100ns.

ABSOLUTE MAXIMUM RATINGS

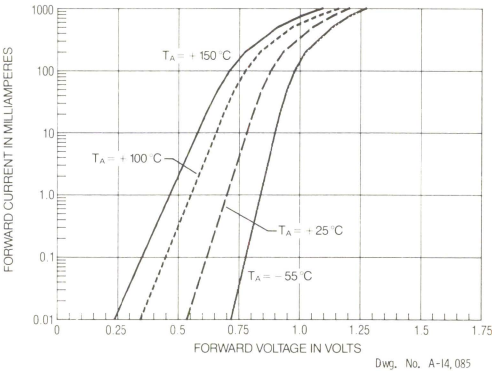

Peak I_F Surge (Pulse Width = 1s) 1000 mA
(Pulse Width = 1 μ s) 4.0 A
Operating Junction Temperature, T_J +150°C
Storage Temperature Range, T_S -55°C to +150°C

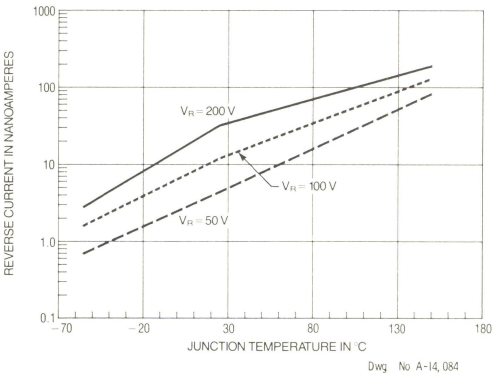

ELECTRICAL CHARACTERISTICS at $T_A = +25^\circ\text{C}$

Characteristic	Test Conditions	Limits			Units
		Min.	Typ.	Max.	
V_{BR}	$I_R = 10 \mu\text{A}$	200	210	—	V
I_R	$V_R = 100\text{V}$	—	0.2	10	nA
V_F	$I_F = 100\text{mA}$	—	880	1000	mV
C_J	$V_R = 0\text{V}$, $f = 1\text{MHz}$	—	6.0	10	pF
t_{rr}	$I_F = I_R = 10\text{mA}$	—	0.1	3.0	μs

JUNCTION CAPACITANCE AS A FUNCTION OF REVERSE BIAS

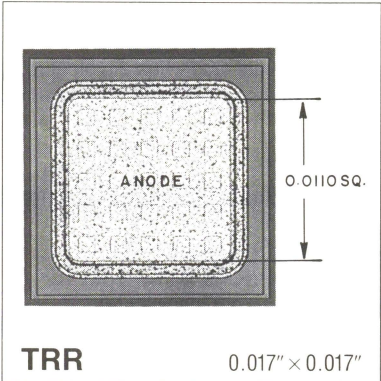

Process TRR

Medium-Speed Switching Diode

Process TRR is a non-gold-doped silicon epitaxial diode designed to 1N3595 specifications and used in medium-speed switching applications.

ABSOLUTE MAXIMUM RATINGS

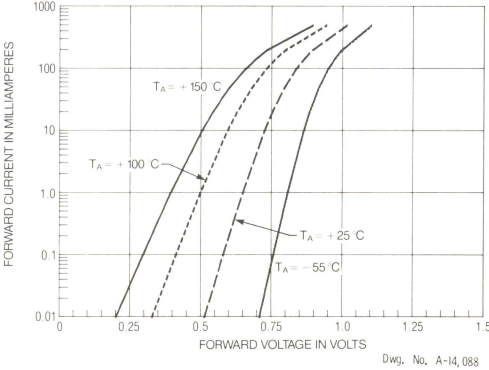

- Peak I_F Surge (Pulse Width = 1s) 500 mA
- (Pulse Width = 1 μ s) 2.0 A
- Operating Junction Temperature, T_J +150°C
- Storage Temperature Range, T_S - 55°C to +150°C

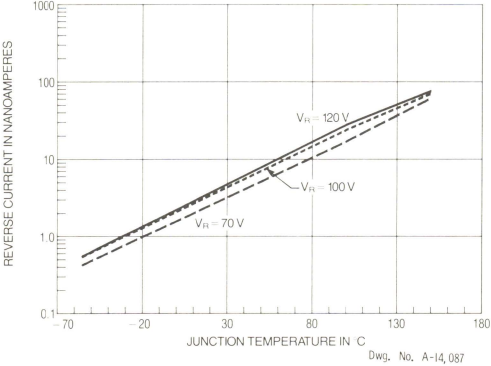

ELECTRICAL CHARACTERISTICS at $T_A = +25^\circ\text{C}$

Characteristic	Test Conditions	Limits			Units
		Min.	Typ.	Max.	
V_{BR}	$I_R = 10 \mu\text{A}$	150	170	—	V
I_R	$V_R = 125 \text{ V}$	—	5.0	10	nA
V_F	$I_F = 100 \text{ mA}$	—	840	1000	mV
C_J	$V_R = 0 \text{ V}$, $f = 1 \text{ MHz}$	—	6.6	8.0	pF
t_{rr}	$I_F = I_R = 10 \text{ mA}$	—	0.04	3.0	μs

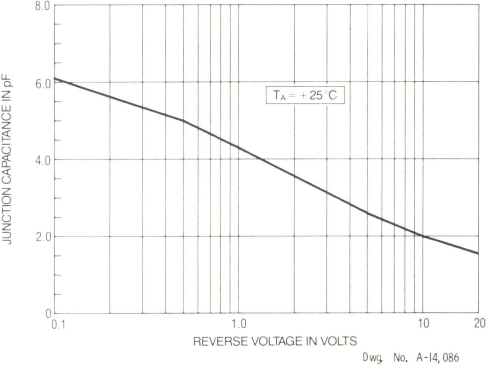

FORWARD CURRENT AS A FUNCTION OF FORWARD VOLTAGE

REVERSE CURRENT AS A FUNCTION OF JUNCTION TEMPERATURE

JUNCTION CAPACITANCE AS A FUNCTION OF REVERSE BIAS

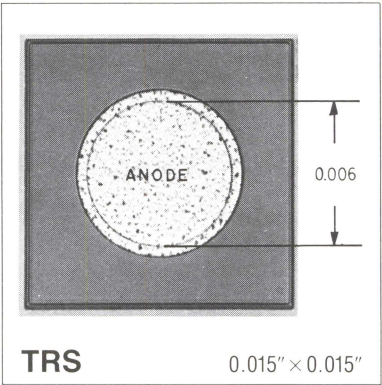

Process TRS

Medium-Speed Switching Diode

Designed for switching applications requiring low leakage-current characteristics, this non-gold-doped silicon epitaxial diode has a typical reverse recovery time of 70ns and a typical I_R of less than 1.0nA.

ABSOLUTE MAXIMUM RATINGS

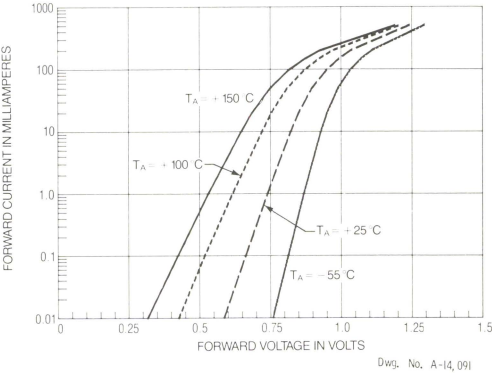

Peak I_F Surge (Pulse Width = 1s) 1000mA
(Pulse Width = 1 μ s) 4.0A
Operating Junction Temperature, T_J +150°C
Storage Temperature Range, T_S -55°C to +150°C

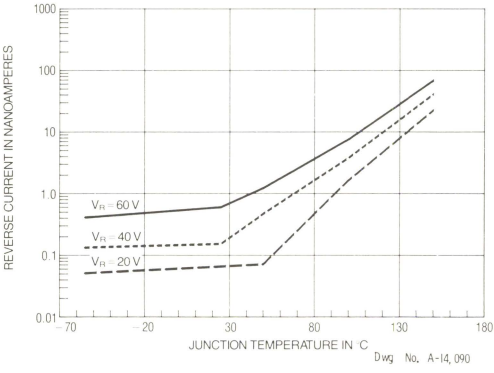

ELECTRICAL CHARACTERISTICS at $T_A = +25^\circ\text{C}$

Characteristic	Test Conditions	Limits		
		Min.	Typ.	Max. Units
V_{BR}	$I_R = 10 \mu\text{A}$	50	75	— V
I_R	$V_R = 40\text{V}$	—	0.2	10 nA
V_F	$I_F = 10\text{mA}$	—	830	1000 mV
C_J	$V_R = 0\text{V}$, $f = 1\text{MHz}$	—	5.0	7.0 pF
t_{rr}	$I_F = I_R = 10\text{mA}$	—	70	100 ns

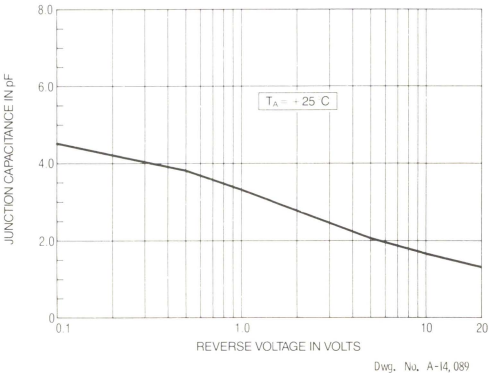

FORWARD CURRENT AS A FUNCTION OF FORWARD VOLTAGE

REVERSE CURRENT AS A FUNCTION OF JUNCTION TEMPERATURE

JUNCTION CAPACITANCE AS A FUNCTION OF REVERSE BIAS

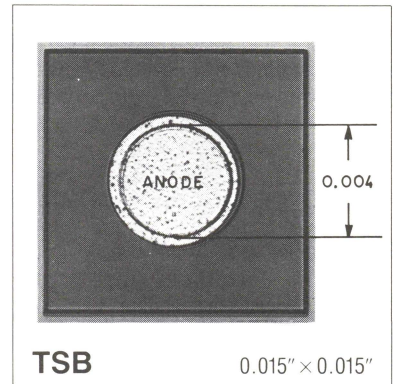

Process TSB

High-Speed Switching Diode

This gold-doped silicon epitaxial diode, designed to meet 1N914 specifications, has a typical reverse recovery time of 3.2 ns and a typical junction capacitance of 0.5 pF.

ABSOLUTE MAXIMUM RATINGS

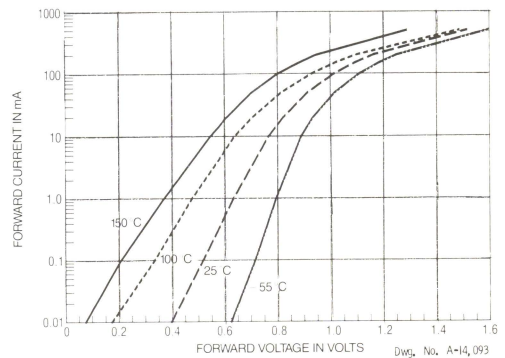

Peak I_F Surge (Pulse Width = 1 s) 500 mA
 (Pulse Width = 1 μ s) 2.0 A
 Operating Junction Temperature, T_J +150°C
 Storage Temperature Range, T_S -55°C to +150°C

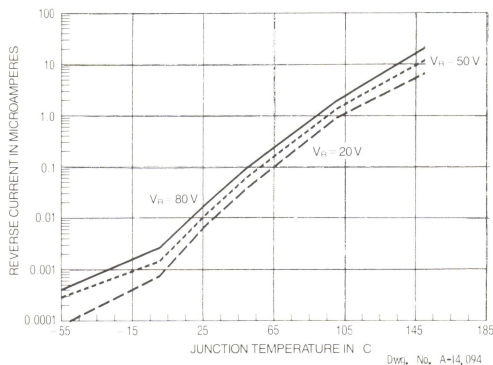

ELECTRICAL CHARACTERISTICS at $T_A = +25^\circ\text{C}$

Characteristic	Test Conditions	Limits			Units

CHIPS-IN-DIPS

SPRAGUE ELECTRIC'S

CUSTOM-ARRAY PROGRAM

The Chips-In-Dips program uses discrete semiconductor chips from Sprague Electric Company's comprehensive line of standard devices to create transistor, diode, and Darlington arrays assembled to users' specifications at our Concord, N.H., manufacturing facility.

The program gives Sprague extensive special-design capabilities for applications with design restrictions such as short lead time, small quantities, and unique circuit requirements. Chips-In-Dips is an attractive alternative to development of monolithic integrated circuits and commitment to high-volume purchases.

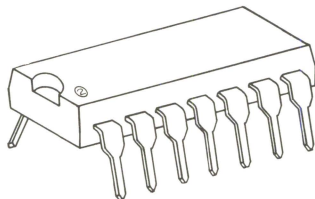

Assembly of discrete devices in dual in-line packages allows relatively higher power dissipation while reducing handling and boosting component density. The standard molded Dip, the package most commonly used for automated circuit assembly, offers superior mechanical protection of components during automatic insertion into printed wiring boards.

Series TPQ transistor arrays, Series TND diode arrays, and Series TPP Darlington arrays are among standard products offered by Sprague's Chips-In-Dips program. Semiconductor chips available for custom-array products include those described in the most recent issue of Sprague catalog CN-164.

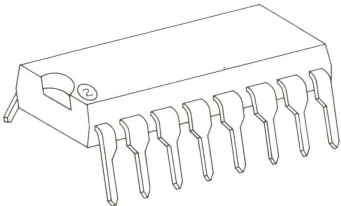

MAXIMUM RATINGS

Dwg. No. A-11,420A

SERIES TND DIODE ARRAYS

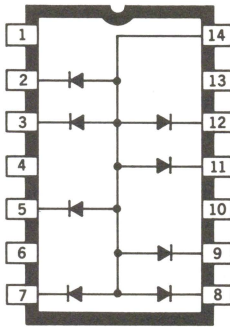

The TND series consists of diode arrays packaged in 14-pin and 16-pin dual in-line plastic packages for easy automatic insertion and better printed circuit board density.

In addition to the diode characteristics for standard products shown here, arrays consisting of diodes with 1N3070, 1N3595, 1N3600, 1N4153, or 1N4447 characteristics can be furnished on request. Other package configurations are available on special order.

TPP4000
MEDIUM-POWER DARLINGTON ARRAY

This Sprague medium-power array consists of four Darlington pairs in a single 14-pin dual in-line plastic package. Features include a collector-current rating of 4 A, a minimum h_{FE} of 2,000, and a package power dissipation rating of 2 W.

The standard molded dual in-line package is identical to the type used for many integrated circuits. It offers superior mechanical protection for circuit elements during automatic insertion into printed wiring boards.

SERIES TPQ QUAD TRANSISTOR ARRAYS

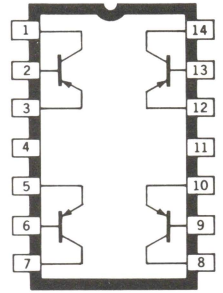

SPRAGUE SERIES TPQ quad transistor arrays are general-purpose silicon transistor arrays consisting of four independent devices. Shown are 20 NPN types, 15 PNP types, and 12 NPN/PNP complementary pairs.

All of these devices are furnished in a 14-pin dual in-line plastic package. The molded package is identical to that used with most consumer integrated circuits and offers superior mechanical protection during insertion into printed wiring boards.

ULN-2031A, ULN-2032A, AND ULN-2033A HIGH-CURRENT DARLINGTON TRANSISTOR ARRAYS

SPRAGUE TYPE ULN-2031A, ULN-2032A, and ULN-2033A High-Current Darlington Transistor Arrays are comprised of seven silicon Darlington pairs on a common monolithic substrate. The Type ULN-2031A consists of 14 NPN transistors connected to form seven Darlington pairs with NPN action. The Type ULN-2032A ($h_{FE} = 500$ min.) and the Type ULN-2033A ($h_{FE} = 50$ min.) consist of seven NPN and seven PNP transistors connected to form seven Darlington pairs with PNP action. All devices feature a common emitter configuration.

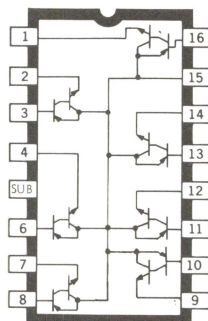

These devices are especially suited for interfacing between MOS, TTL, or DTL outputs and 7-segment LED or tungsten filament indicators. Peak inrush currents to 100 mA are allowable. They are also ideal for a variety of other driver applications such as relay control and thyristor firing.

The ULN-2031A, ULN-2032A, and ULN-2033A transistor arrays are housed in 16-lead DIP plastic packages which include a separate substrate connection for maximum circuit design flexibility.

ULS-2045H AND ULN-2046A TRANSISTOR ARRAYS
 (Three Isolated Transistors
 and One Differential Amplifier

THE ULS-2045H and ULN-2046A are general-purpose transistor arrays each consisting of five silicon N-P-N transistors on a single monolithic chip. Two transistors are internally connected to form a differential pair. Integrated circuit construction provides close electrical and thermal matching between each transistor.

These arrays are well-suited for a wide range of applications such as: DC to VHF signal processing systems; temperature-compensated amplifiers; custom designed differential amplifiers and discrete transistors in conventional circuits.

Two package configurations are available. Type ULS-2045H is supplied in a hermetic 14-lead dual in-line ceramic package and is rated for operation over the military temperature temperature of -55°C to

$+125^{\circ}\text{C}$. Type ULN-2046A is electrically identical to the ULS-2045H but is supplied in a dual in-line plastic package rated for -20°C to $+85^{\circ}\text{C}$ ambients.

Dwg. No. A-9034

Emitter-Base Voltage, V_{EBO}	6 V
Collector Current, I_{C}	50 mA
Operating Temperature Range, T_A :	
Type ULS-2045H	-55°C to $+125^{\circ}\text{C}$
Type ULN-2046A	-20°C to $+85^{\circ}\text{C}$
Storage Temperature Range, T_s	-65°C to $+150^{\circ}\text{C}$

Notes:

- The maximum ratings are limiting absolute values above which the serviceability may be impaired from the viewpoint of life or satisfactory performance. The breakdown voltages may be far above the maximum voltage ratings. To avoid permanent damage to the transistor, do not attempt to measure these characteristics above the maximum ratings.
- Pin 13 is connected to the substrate. This terminal must be tied to the most negative point in the external circuit to maintain isolation between transistors and to provide for normal transistor action.

ULN-2046A-1
TRANSISTOR ARRAY

TYPE ULN-2046A-1 general-purpose transistor array consists of five silicon NPN transistors, two of which are connected as a differential amplifier. The monolithic construction provides close electrical and thermal matching between all transistors.

Except as shown in the following electrical characteristics, Type ULN-2046A-1 transistor array is identical to Type ULN-2046A.

Dwg. No. A-9034

ULN-2047A TRANSISTOR ARRAY

(Three Differential Amplifiers)

TYPE ULN-2047A is a silicon NPN multiple transistor array comprising three independent differential amplifiers. It is specifically intended for use in switching applications such as electronic organ keyboards. All base leads are brought out on one side of the 16-lead plastic dual in-line package to simplify printed wiring board layout. A separate substrate connection permits maximum circuit design flexibility.

Type ULN-2047A is supplied in a 16-pin dual in-line plastic package.

ULN-2054A TRANSISTOR ARRAY
(Dual Independent Differential Amplifiers)

THE ULN-2054A is a transistor array consisting of six silicon NPN transistors on a single monolithic chip. The transistors are internally interconnected to form two independent differential amplifiers.

The ULN-2054A is intended for a wide range of applications requiring extremely close electrical and thermal matching characteristics. Some applications are: cascade limiter circuits; balanced mixer circuits; balanced quadrature/synchronous detector circuits; balanced (push-pull) cascade/sense/IF amplifier circuits; or in almost any multifunction system requiring RF/Mixer/Oscillator, converter/IF functions.

Available in a 14-lead dual in-line plastic package the ULN-2054A is rated for operation over a -20°C to $+85^{\circ}\text{C}$ ambient temperature range.

Dwg. No. A-8035A

- Other features are:
- Input Offset Voltage—5 mV max.
 - Input Offset Current—2 μA max.
 - Voltage gain (single-stage double-ended output)
— 32 dB typ.
 - Common-Mode Rejection Ratio (each amplifier)
— 100 dB typ.

Storage Temperature Range, T_S	-65°C to $+150^{\circ}\text{C}$

Notes:

1. The maximum ratings are limiting absolute values above which the serviceability may be impaired from the viewpoint of life or satisfactory performance. The breakdown voltages may be far above the maximum voltage ratings. To avoid permanent damage to the transistor, do not attempt to measure these characteristics above the maximum ratings.
2. Pin 5 is connected to the substrate. This terminal must be tied to the most negative point in the external circuit to maintain isolation between transistors and to provide for normal transistor action.

ULN-2081A AND ULN-2082A GENERAL-PURPOSE HIGH-CURRENT TRANSISTOR ARRAYS

ULN-2081A AND ULN-2082A GENERAL-PURPOSE HIGH-CURRENT TRANSISTOR ARRAYS

SPRAGUE TYPE ULN-2081A and ULN-2082A Transistor Arrays are comprised of seven high-current silicon NPN transistors on a common monolithic substrate. The Type ULN-2081A is connected in a common-emitter configuration and the Type ULN-2082A is connected in a common-collector configuration.

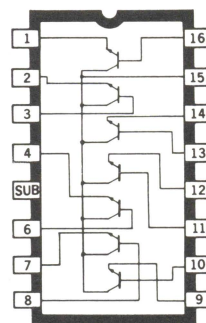

Both arrays are capable of directly driving seven segment displays and LED displays. They are ideal for a variety of other driver applications such as relay control and thyristor firing.

Type ULN-2081A and ULN-2082A are housed in 16-lead Dip plastic packages which include a separate substrate connection for maximum circuit design flexibility.

Dwg. No. A-9042B

ULN-2081A

Dwg. No. A-9043B

ULN-2082A

ABSOLUTE MAXIMUM RATINGS

Power Dissipation (any one transistor)	500 mW
(total package)	750 mW
Ambient Temperature Range (operating)	-20°C to +85°C
Individual Transistor Ratings:	
Collector-to-Emitter Voltage, V_{CE0}	16 V
Collector-to-Base Voltage, V_{CBO}	20 V
Collector-to-Substrate Voltage, V_{C10}	20 V
Emitter-to-Base Voltage, V_{EBO}	5 V
Collector Current, I_C	200 mA
Base Current, I_B	20 mA

NOTE:

The collector of each transistor in the Type ULN-2081A and ULN-2082A is isolated from the substrate by an integral diode. The substrate must be connected to a voltage which is more negative than any collector voltage so as to maintain isolation between transistors, and to provide normal transistor action. Undesired coupling between transistors is avoided by maintaining the substrate terminal (5) at either d-c or signal (a-c) ground. An appropriate bypass capacitor can be used to establish a signal ground.

	I_{CBO}	$V_{CB} = 10 \text{ V}$			1	μA

ULN-2083A AND ULS-2083H TRANSISTOR ARRAYS
(Five Independent NPN Transistors)

DESIGNED for use in general purpose, medium current (to 100 mA) switching and differential amplifier applications, the ULN-2083A and ULS-2083H transistor arrays each consist of five NPN transistors on a single monolithic chip. Two transistors are matched at low currents (1 mA) making them ideal for use in balanced mixer circuits, push-pull amplifiers, and other circuit functions requiring close thermal and offset matching.

A separate substrate connection permits maximum circuit design flexibility. In order to maintain isolation between transistors and provide normal transistor action, the substrate must be connected to a voltage which is more negative than any collector voltage. The substrate terminal (pin 5) should therefore be maintained at either d-c ground or suitably bypassed to a-c ground to avoid undesired coupling between transistors.

Two package configurations are available. The Type ULN-2083A is supplied in a 16-lead dual in-line plastic package for operation over the temperature range of -20°C to $+85^{\circ}\text{C}$. This package is sim-

ilar to JEDEC style MO-001AC. The Type ULS-2083H is electrically identical to the ULN-2083A but is supplied in a hermetic dual in-line package for operation over the temperature range of -55°C to $+125^{\circ}\text{C}$. This package conforms to the dimensional requirements of Military Specification MIL-M-38510 and can meet all of the applicable environmental requirements of Military Standard MIL-STD-883.

NOTE: The substrate terminal must be tied to the most negative point in the external circuit to maintain isolation between transistors and to provide for normal transistor action.

Figure 1 is a dimensional drawing of a three-pin test specimen. The drawing shows a rectangular specimen with three parallel pins extending from one end. The dimensions are given in inches with upper and lower tolerance values. Key dimensions include: overall width (0.210/0.170), pin diameter (0.022/0.015), pin spacing (0.105/0.095), and pin length (0.165/0.125). A 'SEATING PLANE' is indicated at the base of the pins. A circular detail shows the pin ends with diameters 0.115/0.080 and 0.020/0.014.

A line graph showing the relationship between Package Power Dissipation (in milliwatts) and Ambient Temperature (in °C) for free air at $T_{J(MAX)} = 150^{\circ}\text{C}$. The y-axis ranges from 0 to 300 mW, and the x-axis ranges from 25 to 150 °C. A straight line with a negative slope is plotted, labeled with $\theta_{JA} = 575^{\circ}\text{C/W}$. The line starts at approximately 215 mW at 25 °C and ends at 0 mW at 150 °C.

SHIPPING

Shipping options for Sprague small-outline transistors and diodes include vial pack and 8 mm tape and reel for use with automated insertion equipment.

The 8 mm tape pack puts 3000 devices on a 7-inch (178 mm) reel. Components can be placed in the tape cavity with the single lead toward the sprocket hole or with the double leads toward the sprocket hole. Tape and reel dimensions conform to EIA Standard 481 Rev. A.

Tape and Reel Options

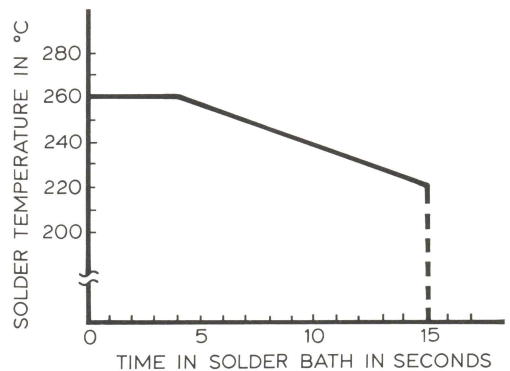

MOUNTING ...

Sprague surface-mount semiconductors can be attached to substrates by conventional techniques such as vapor-phase or wave soldering and hot-plate methods.

Recommended maximum time/temperature soldering conditions are shown in the graph. In general, attachment with a soldering iron is not recommended due to the difficulty of consistently controlling temperature and time temperature.

AND CLEANING

Sprague small-outline semiconductors are compatible with most commonly used defluxing solvents. Freon-based alcohol compounds such as Du Pont TMS or TES (or equivalents) are recom-

mended. Solutions containing methylene chloride or other known epoxy solvents should not be used.

PACKAGE INFORMATION

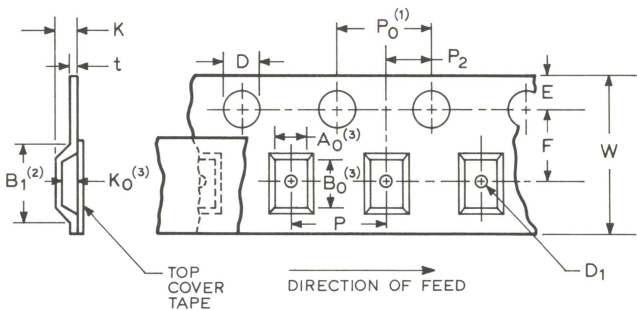

TAPE DIMENSIONS FOR TO-236AA/AB

Dimension	Millimeters	Inches
B ₁ Max. ⁽²⁾	4.2	0.165
D	1.5 (+0.10, -0.0)	0.059 (+0.004, -0.0)
D ₁ Min.	1.0	0.039

SPRAGUE FACILITIES

Sprague Electric Company manufactures active and passive components at 15 North American locations and in five countries in Europe and the Far East. It has been a high-volume producer of semiconductors for more than 30 years.

Headquarters of the Semiconductor Division is in Concord, New Hampshire. Wafer fabrication for discrete semiconductors is done at Worcester, Massachusetts, and Garland, Texas. Assembly operations are located at the Concord and Garland plants and in Manila, the Philippines.

HOW TO ORDER

To place an order, obtain price and delivery information, or request technical literature, contact your local Sprague sales office or sales representative. (See the following lists of sales locations.) For additional help:

From U.S. and Canada

Sprague Electric Co.
92 Hayden Avenue
Lexington, MA 02173
(617) 862-5500
Telex: 710-321-0021

From Asia

Sprague Asia Ltd.
G.P.O. Box 4289
Hong Kong
0-283188
Telex: 43395

From Europe and Mideast

Sprague World Trade Corp.
18 Avenue Louis Casai
1209-Geneva
Switzerland
98-4021
Telex: 845-23469

Requests for technical information and applications assistance can be sent to the appropriate manufacturing facility.

For discrete semiconductor chips, discrete semiconductors in plastic packages, MOS capacitors:

Sprague Electric Company
70 Pembroke Road
Concord, NH 03301
(603) 224-1961
Telex: 710-361-1495

For junction field-effect transistors in metal cases:

Sprague InterFET
322 Gold Street
Garland, TX 75042
(214) 487-1287

For monolithic transistor arrays:

Sprague Electric Company
115 Northeast Cutoff
Worcester, MA 01606
(617) 853-5000
Telex: 710-340-6304

Sprague Electric Company
World Headquarters
92 Hayden Avenue
Lexington, MA 02173
(617) 862-5500

In the construction of the components described, the full intent of the specification will be met. The Sprague Electric Company, however, reserves the right to make, from time to time, such departures from the detail specifications as may be required to permit improvements in the design of its products. Components made under military approvals will be in accordance with the approval requirements.

The information included herein is believed to be accurate and reliable. However, the Sprague Electric Company assumes no responsibility for its use; nor for any infringements of patents or other rights of third parties which may result from its use.
